CONTENTS

Laboratory test No 1. INVESTIGATION OF METEOROLOGICAL CONDITIONS IN INDUSTRIAL PREMISES.....	5
Laboratory test No 2. INVESTIGATION OF LIGHTING (ILLUMINANCE) IN INDUSTRIAL PREMISES.....	22
Laboratory test No 3. INVESTIGATION OF NOISE REDUCTION MEASURES.....	38
Laboratory test No 4. INVESTIGATION OF THE ELECTROMAGNETIC FIELD EMITTED FROM MOBILE PHONES.....	61
Laboratory test No 5. ANALYSIS OF PROTECTIVE EARTHING SYSTEM..	77
Laboratory test No 6. INVESTIGATION OF IONIZING RADIATION....	99
REFERENCES.....	118

INTRODUCTION

These guidelines will help students to prepare well for each laboratory test in advance at home and to understand the essence of the methods of laboratory work. It is recommended to study the presented theoretical bases and descriptions of work methods before each laboratory work.

The test data obtained during the laboratory work must be neatly listed in the tables of the laboratory test report prepared in advance. These data are stored until the end of the semester. Each laboratory test must be signed by the lecturer. A report on the performance of laboratory work is submitted for the defense of laboratory tests. It must be prepared according to the established requirements. Errors noticed by the teacher must be corrected.

These guidelines are intended for first-cycle full-time and distance study students of all majors of VILNIUS TECH.
